---

## Introduction

---

There are unique benefits in using the Information Technology Team at The Queen Elizabeth II Conference Centre. Our IT specialists at the Centre are based entirely in house, and have exclusive knowledge of the building. This makes us appropriately the best, most cost-effective, and easiest IT choice to make. Working on the majority of the Centre's events, our in-house team has a unique understanding of our clients' needs. With this knowledge we can offer the best technical specification for each show.

We also monitor and update our equipment on a continuous basis, using the bespoke requirements of our client base as reference. Our equipment is of a high technical specification, making it appropriate and effective for every client's purpose - the perfect choice for your show. In addition to internet connectivity using ethernet technology (which can carry speeds of up to 100 Mbps), we also offer a wireless Public Hotspot operating via numerous access points throughout the Centre. Investing in the 'fabric' of the building, we can therefore offer a speedy wireless internet connection; sophisticated telephony; to enhance any event held at The Queen Elizabeth II Conference Centre. We also provide full technical support for the duration of your event.

We can supply a number of services to organisers in addition to offering standard IT business support during your event. We offer an exhibition service providing individual PCs and plasmas. A popular exhibition option is the Cyber Café, which, using the LAN or Hotspot within The Queen Elizabeth II Conference Centre, encourages visitors to access corporate and product information on-line. Also available is an affordable in-house video conferencing service. Branding and sponsorship opportunities are available alongside the Hotspot service.

This rate card represents a general guide for clients. If there are individual items you require that are not included, please call us and we will be happy to help you.

# Information Technology
